EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

LCA information

Functional unit / declared unit: Declared unit is 1000 lumens of the industrial LED luminaire.

Reference service life: 80 000 hours.

Time representativeness: Site specific data from producer are based on 1 year average for process data (reference year 2022). Time scope less than 10-years was applied for background data. Time scope less than 2-years was applied for specific data.

Database(s) and LCA software used: software LCA for Experts. Sphera databases, ecoinvent database.

Description of system boundaries:

The system boundary is Cradle to grave and module D (A+B+C+D) according to EN 15804 + A2/AC:2021. It covers the production of raw materials, all relevant transport down to the factory gate, manufacturing by Trevos, a.s., transport from the Trevos, a.s. plant to the site (considered weighted average 769 km), installation of luminaire, operational energy of use of luminaire (considered European residual electricity grid mix), deconstruction of the luminaire, transport of deconstructed materials, waste processing, recovery, and disposal of used luminaire.

System diagram:

More information:

Cut off rules: The cut-off criterion was chosen based on the used PCR. According to the used PCR, more than 95 % of flows were included.

Allocations: All material and energy flows were assigned to one product. Allocation was not necessary.

Secondary aluminium alloy in radiator production, general content of scrap steel and iron in steel, cold rolled production, general content of stainless steel scrap in stainless steel production and general content of steel scrap in steel, Zn production are used in production of a luminaire. No secondary fuels are used in production.

Generic process data for the production of input materials and components were used.

Electricity consumption: Generation of electricity consumed within Trevos, a.s. production was based on the Czech residual electricity grid mix.
